Member Summary: Agile in the Enterprise Survey

December 2022
Methodology

2022 Gartner Agile in the Enterprise Survey. This survey was conducted online from 18 October through 7 November 2022 to understand the drivers of success with agile ways of working and the reasons for failure in order to establish success criteria to assess agile capabilities.

120 IT & business leaders who were screened to be involved with agile ways of working at their organization participated. Members from North America (n=55), EMEA (n=45), Asia Pacific (n=14) and Latin America (n=6) responded to the survey.

The survey was developed collaboratively by a team of Gartner analysts and Gartner's Research Data, Analytics and Tools team.

Disclaimer: Results of this survey do not represent global findings or the market as a whole but reflect the sentiments of the respondents and companies surveyed.

For additional queries on the data or survey instrument please contact Tabitha.Cassidy@gartner.com
Key Takeaways

- **Use of Agile in Work**: 50% of respondents use Agile for over half of their work with 7% of them using it for all of their work, while 50% use it for less than half of their work.

- **Success**: Over one-thirds are very successful (36%) with agile, while most rate their success as more neutral (57%).

- **Top Agile Disfunction**: 27% say Water-Scrum-Fall model has most negative impact.

- **Business value of agile**: Majority indicate agile delivered value to organisation (70%)—with 20% not sure.

- **Customer Needs vs. Strict Agile**: Majority lean more toward customer centric approach (64%) vs. conforming to strict agile practices (16%), while 20% were split.

- **Processes**: Scrum, Team Retrospectives and Kanban are used by more than 75% of the respondents, with at least half using most other processes.

- **Technical Practices most-used**: Two-third of respondents use CI, followed by 50% using monitor & observability.
Key Findings
Agile Use: Split with 50% using agile ways of working for over half of their work, 50% using for less than half

Percentage of Work Using Agile Ways of Working

- Use agile to manage all (100%) of our work: 7%
- Use agile to manage most (50% or more) of our work: 43%
- Use agile to manage some (less than 50%) of our work: 45%
- Only use agile for pilot implementation: 5%

n = 120; IT Leaders involved in Agile
S01. Which of these best describes agile ways of working in your organization?

#### Over focus on 'business value' ignoring tech debt and needed maintenance
~Chief Information Security Officer and Business Intelligence Manager

#### No stable teams
~IT Infrastructure Architect

#### Me being part of a huge organization with an enormous product suite, and different product teams at the different stages of produce evolution life cycles, I infer that different product with different leadership and team's culture maps to different dysfunction above
~Functional architecture manager

#### Complexity
~Principal Agile Coach

#### Agile teams depending on non-agile external delivery
~Senior IT Manager

#### 1st: the naming of everything around. We translated into simple and common language
~Infrastructure Architect

Top Agile Dysfunctions: Definitions

**Agile in Name Only (AINO):** Agile has been adopted as a process framework within technical teams without embracing the required cultural and full-value-stream changes.

**Water-Scrum-Fall:** A partial agile implementation where modern practices are sandwiched within the existing legacy (waterfall) process.

**Fragile Agile (FrAgile):** FrAgile organizations seek stability through strong structures, enforced process and risk avoidance focused on delivering something as quickly as possible instead of delivering value to the customer.

**ScrumBut:** Organizational dysfunction is accepted as the natural way of working. The standard syntax for this is [We use Scrum, but] <reason> <workaround>.

**Zombie Scrum:** Blind adherence to the Scrum framework without adopting the mindset required to make it work. Teams are lifeless and joyless with members unable to introduce real change.

**Cargo Cult Agile:** Seeks results through ceremony and ritual, mimicking agile processes and pipelines, without the cultural and structural changes required for long-term transformation.

**Agile Washing:** Massive hierarchies, heavyweight project processes, technical-debt-ridden products and unwieldy legacy practices all remain unchanged. A highly visible agile front end is added to make a traditional organization appear modern and innovative.

**Lipstick Agile:** Agile practices are cosmetically applied without making any transformational change. This superficial adoption only pays lip service to effective transformation and failing to embrace the required paradigm shift.

**Agile Success Theater:** Product teams appear to perform flawlessly, but it is all an illusion. Teams reverently follow agile practices with impressive velocity metrics, burndown charts and beautifully crafted Kanban boards, but no real business value is delivered.

**Gated Agile:** Compromises made to implement agile in functional stages leads to suboptimization and waste. Ingrained silos, manual approvals and inter-team handoffs inhibit frequent value delivery.

**Dark Scrum:** Scrum process framework is deliberately misapplied to exert pressure and oppress developers, limiting change and preventing the emergence of self-management.

**Feature Factory:** Business focused on building features rather than customer solving problems.
